Dear readers of the paper,

I want to apologize for all the trouble I caused by our paper. I hold every responsibility because I made all the important decisions (and also specifically wrote the problematic expressions).

I don't know how to explain myself. But I hope to do...

-study objective: It is unclear whether female endotracheal intubation skills are not inferior to male physicians.

method: This was an observational study performed on adult ED patients. No inferiority was tested using covariates, such as clinical model, and anemized oro-tracheal intubation first-pass success. This was done using a large, prospective airway registry.
